PROFESSIONAL SUMMARY

Computer Science & Software Engineering graduate (Maynooth University, September 2026, 2:1 Honours) working across quant research and software engineering. Built a six-phase, pre-registered research program (176-test CI suite) that honestly disproved a \$28,400 backtest edge across ~10 years and three futures markets, and earned ~\$15,000 in live trading profit at DLT Capital. Ships full-stack products (TypeScript/Next.js, Python/FastAPI) and AI apps with LLM integration and agentic automation.

CORE COMPETENCIES

Full-Stack Development

Quantitative Research

Test-Driven Development

LLM/AI Integration

WORK EXPERIENCE

DLT Capital

Feb 2025 - Jul 2025

Quantitative Researcher & Software Engineer (Part-Time)

Maynooth, Ireland

- Built systematic trading strategies generating ~\$15,000 in live profit using statistical filters and strict risk rules.
- Built and tested automated crypto/futures trading systems and the supporting backtesting software used to research, validate and monitor live strategies.

Circle K

Jul 2023 - Apr 2025

Sales Assistant (Part-Time)

Dundrum, Dublin

- Handled POS, payments and cash accurately in a high-volume forecourt while keeping service and stock standards under peak pressure.

PROJECTS

Quantitative Strategy Research Program

Six-phase, pre-registered research program (176-test CI) with a no-lookahead backtest engine and walk-forward validation that rigorously proved a promising \$28,400 backtest edge was not real - avoiding a costly false positive - across ~10 years and three futures markets (1,402 out-of-sample trades). Followed by two further published pre-registered studies, both honestly NOT PROVEN: Polymarket favourite bias (2,418 markets) and a football career model (24,057 player-seasons).

Python, pandas, NumPy, pytest, GitHub Actions

Trading Analytics Dashboard

Full-stack trading journal (230+ commits) that logs real trades and surfaces win-rate, equity-curve and calendar analytics: TS/Next.js front end with auth + a Python/FastAPI back end; typed schemas, tests, live on Vercel.

TypeScript, Next.js, FastAPI, Python, Vercel

Jarvis - Voice-Driven AI Assistant

Personal AI butler, solo zero-to-production, now open source (CI + secret scanning): an Electron HUD with 100% local speech-to-text (whisper.cpp) over a headless Claude-agent pipeline delivering a daily 08:30 Telegram briefing with two-way remote.

Electron, whisper.cpp, PowerShell, Claude agent, Telegram Bot API

Speed-to-Lead AI Agent

Interactive prototype of an AI receptionist: free-text chat, owner ROI dashboard, live public demo. Production stack designed, not yet built.

JavaScript, HTML/CSS, GitHub Pages

EDUCATION

B.Sc. (Hons) Computer Science and Software Engineering [Maynooth University](#)

Sept 2026

2:1 (Upper Second-Class Honours). Modules: Machine Learning & Neural Networks, AI & Language Processing, Parallel & Distributed Systems, Algorithms & Data Structures, Software Testing & Verification, Databases.

SKILLS

Languages: Python, TypeScript, JavaScript, Java, C++, SQL, PineScript, HTML, CSS

Frameworks: React, Next.js, Node.js, Express, FastAPI, pandas, NumPy, pytest, Vitest, Tailwind CSS

AI/ML: LLM integration (Anthropic, Groq), prompt engineering, AI agents & tool-use (MCP), applied ML & meta-labelling

Tools: Git, GitHub, GitHub Actions, Supabase, MongoDB, Vercel, Jupyter, Postman, TradingView

Interests: Judo black belt (16 yrs, multiple Irish national medals); funded algorithmic-trading account with verified payouts
